# **LEAD STORY**

# Four possible scenarios post-GE14

### BY BILLY TOH

Dubbed the "mother of all elections", the 14th general election is set to dominate headlines as the date of Parliament's dissolution draws closer. Asia's longest serving leader, Tun Dr Mahathir Mohamad, has returned to the political fray, joining hands with his former deputy turned–nemesis–turned–ally, Datuk Seri Anwar lbrahim, to take on his former protégé–turned–adversary Datuk Seri Najib Razak — the current prime minister.

The stage is set for what is expected to be an all-out battle, with Mahathir, 92 — with five consecutive election victories under his belt as former Barisan Nasional chairman — going against Najib — the eldest son of Mahathir's mentor, Tun Abdul Razak Hussein, the second prime minister.

Will BN manage to regain a two-thirds majority or will the opposition score an unprecedented win?

The Edge looks at some of the potential outcomes and market responses.

Analysts and fund managers highlight four possible scenarios:

- Base case, and the most likely scenario: BN to retain its simple majority
- 2. BN to win a bigger majority (presumably two-thirds)
- 3. A hung parliament
- 4. A surprise Pakatan Harapan victory

# SCENARIO 1

### Relief rally expected if Barisan Nasional retains its simple majority

With most fund managers and analysts pricing in a simple-majority victory for Barisan Nasional in the 14th general election (GE14), the stock market is expected to experience a relief rally if the prediction comes true.

In GE13 when BN retained power with 133 seats out of 222 seats despite losing the popular vote, the stock market rebounded positively post-election.

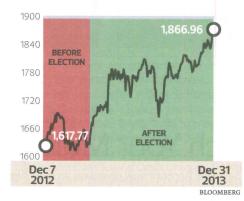

The market had been relatively flat prior to polling day as the election outcome was uncertain owing to expectations that the ruling coalition could lose amid the opposition's rallying cries of "Ubah" and "Ini Kalilah".

On the last trading day before the polls, the FBM KLCI only edged up 0.56% to 1,694.77 points.

However, the day after the election results were announced, the benchmark index jumped 3.4% and continued to rally until the year end, gaining a tenth to close 2013 at 1,866.96 points.

UOB Asset Management (M) Bhd chief investment officer Francis Eng Tuck Meng says the historical evidence suggests the market tends to be relatively flat in the lead-up to a general election but rebounds on average after election uncertainties are removed.

# FBM KLCI in 2013

"Under this scenario, it suggests positive returns post-election," he says.

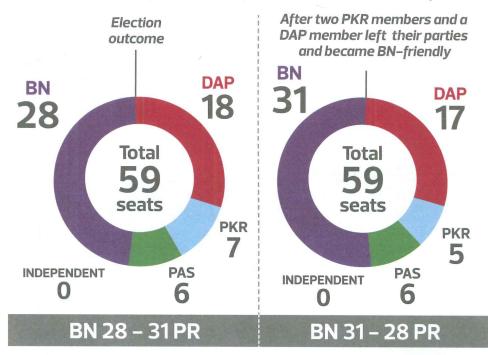

Saturna Sdn Bhd group president Monem A Salam concurs. He says the continuity of government policies are better ensured when the incumbents get an extended mandate.

"Markets do not like uncertainty, whether it is with regard to policy, politics or the economy. So, if the election outcome is as expected, then we should see a relief rally, which could last for about a week to four months," he adds.

A head of research who did not want to be named believes the construction and infrastructure sectors will be the biggest beneficiaries in such an event.

# Uncertainty over which party will govern could arise under a hung parliament/state assembly

Nearly a year after GE12, BN recaptured the Perak state government when three assemblymen left their parties and became BN-friendly

"If you look at the construction players, they have not really been moving upwards. Part of the reason could be due to the uncertainties about the outcome of the upcoming election. If BN retains its seats, it is likely that most of the infrastructure projects will continue. We will probably see some positive movement among these players," he says.

"At the moment, there is a risk of policy change if there is a change in government."

As at March 7, the Bursa Malaysia Construction Index had fallen 5.3% year on year and was down nearly 7% year to date. In contrast, the FBM KLCI gained 9.5% from a year ago and 2.5% year to date.

# SCENARIO 2

# FBM KLCI to see a strong rally if BN regains a two-thirds majority

A two-thirds majority win for BN would boost foreign investor confidence and is projected to translate into a strong market rally.

# How the FBM KLCI performed 12 months after polling day?

GE	YEAR	KLCI'S 12-MONTH RETURN AFTER POLLING DAY	BN WITH TWO-THIRDS MAJORITY
5	1978	6.9	Yes
6	1982	16.2	Yes
7	1986	113.3	Yes
8	1990	8.0	Yes
9	1995	19.2	Yes
10	1999	-1.8	Yes
11	2004	-2.1	Yes
12	2008	-33.8	No
13	2013	9.8	No
			BLOOMBERG

Eng says the FBM KLCI could see an even higher return should BN regain a two-thirds majority — a majority it had commanded until GE12 in 2008.

"The uncertainty only became more pronounced recently. If you look at historical data, the FBM KLCI performed better in the 12 months post-election in five of seven general elections prior to 2008," says a local fund manager.

"From 1978 to 1995, the 12-month average return of the index from the election date was 32.7%."

The election risk was heightened after BN,

led by the then prime minister Tun Abdullah Ahmad Badawi, lost its traditional two-thirds majority in 2008, he says. Ironically, Abdullah had led the ruling coalition to a landslide victory in the preceding polls in 2004.

"Of course, when it was under [Tun] Dr Mahathir [Mohamad], there was some political risk during the Reformasi period, but it was only a temporary blip, unlike what we are seeing today. So, if BN regains the two-thirds majority, it will definitely reduce the political risk and boost foreign investor confidence," says the fund manager.

Monem concurs that a stronger mandate will underscore the people's confidence in the administration as they will be clear on its policies and direction. "This will be good for stability and it eliminates the risk of uncertainty. We should see a slightly stronger rally right after the election," he says.

Apex Investment Services Bhd managing director Clement Chew opines that market weakness in the weeks ahead could provide investors with a buying opportunity if the election is projected to be held in late April or May. "The market is likely to trend upwards when this uncertainty is removed," he says.

As in scenario 1, construction players are expected to benefit from the continuation of government policy and further infrastructure spending. Banks, utilities, construction companies and selective small and mid-cap stocks could see an increase in buying interest.

# SCENARIO 3

# Heavy selldown in the event of a hung parliament as uncertainties loom large

In the event of a hung parliament where both BN and the opposition coalition Pakatan Harapan fail to obtain an outright mandate to assume control of the government, investors could trigger a heavy selldown as they pull money out of the market to wait out the uncertainties.

This will be the worst possible outcome for investors, Chew says.

"The market abhors uncertainty. A hung parliament creates a leadership vacuum and time will be needed to resolve this. The implementation of projects and decision-making may take a back seat. This will affect the earnings of some companies," he says.

"As a hung parliament is a rare occurrence, buyers are likely to stay away until clarity emerges. The market is likely to suffer

# Election jitters not the main culprit in previous market crashes

Malaysia's stock market may be susceptible to changes in the political landscape but previous large corrections or crashes were hardly driven by election outcomes

The economic downturn in developed nations caused by US high interest rate 2000 policy resulted in the collapse of commodity prices

## 1987 Black Monday

The DJIA sank 22.6% in a single day.
The KLCI followed suit, falling 15.7% to 302.31 points.
Black Monday remains the local market's largest one-day percentage decline to date with the crash attributed largely to a programmed selloff.

# 1997 Asia financial crisis

Perhaps the worst time for local equities was during the 1997/98 Asian financial crisis. A bull market, which had propelled the KLCI to 1,271.57 points in February 1997 — not far off the then 1994 record high of 1,314.46 — was halted in its tracks by the collapse in the baht after currency speculators bet against it. Within months, the currencies of Indonesia, South Korea and Malaysia tumbled like dominos, dragging their stock markets along. By September 1998, the KLCI had slumped 79.3% to a record low of 262.7 points.

# 2008 global financial crisis

The 2008 global financial crisis — triggered by the US subprime mortgage crisis — also hurt the FBM KLCI but the benchmark's decline coincided with GE12, in which the ruling coalition Barisan Nasional lost its two-thirds parliamentary majority for the first time. The Dow Jones Industrial Average (DJIA) sank 31.9% while the Malaysian market declined 36.3%. The MSCI World Index saw an even bigger fall of 40.3% over the year.

# 2015 oil price meltdown

The FBM KLCI dropped 13.2% to 1,621.04 points after oil prices fell to a low of US\$36.11 per barrel in December from above US\$100 given the significant reliance on oil revenue. then. Oil and gas companies were hit hard by the low oil price environment, the negative effect spilling over into other industries, especially banking, which had large exposure to the sector.

Commenting on the impending Malaysian election, Inter-Pacific Asset Management Sdn Bhd CEO Lim Tze Cheng says the outcome could cause initial uncertainty but the effect will not be longlasting. "What is important for investors is whether a company can deliver growth regardless of the election outcome."

Saturna Sdn Bhd president Monem Salam expects the election outcome to have marginal impact on the stock market and anticipates that listed companies will continue to do well.

"The stability of the government, laws and implementation of the laws are a healthy sign of our democracy. It's the reason the Malaysian stock market usually has a slight premium compared with its regional peers," he observes.

the Straits Times Industrial Index plunged nearly a fourth to a low of 130 in late 1970 from 170 in April 1969.

In 2008, when BN lost Penang, Selangor, Kedah and Perak while Kelantan remained with the opposition, the share market tanked in line with global markets caught in the financial crisis at the time. However, the Dow Jones Industrial Average's 31.9% decline was surpassed by the KLCI's 36.3% plunge.

"If BN were to lose control of the government, the market will tank as investors would price in the worst-case scenario. The risks from the 1MDB (1Malaysia Development Bhd) investigation would resurface as the market would need to look at the probability of a full-blown probe into the issues, as promised by Dr Mahathir in PH's election manifesto," says a market observer.

Chew, however, thinks that the market will move higher in the short term despite a PH victory. "Even though this is an unprecedented event, the market will move higher simply because an uncertain event has been removed. There is a possibility that the market will be fuelled by hopes of change and election promises. The hype will fuel the exuberance. If the market rallies, investors should sell as the reality may not match the rhetoric."

He points out that a new leadership would entail profound changes, including government policies, priorities, projects and people in charge.

a material decline in the short term under this scenario."

31 Jan, 1980

230.71

Eng also expects the knee-jerk reaction to a hung parliament to be negative.

"Investors will be concerned about politicking and whether it could affect the government's effectiveness in terms of policies and getting things done. Negative sentiment could be protracted, depending on the government's effectiveness under this scenario," he says.

A case in point is GE12 in 2008. BN lost Perak when it captured 28 seats to the opposition's 31 seats. The then opposition Pakatan Rakyat comprised the Democratic Action Party (DAP), Parti Keadilan Rakyat (PKR) and Parti Islam Se-Malaysia (PAS).

After 11 months in power, Pakatan Rakyat saw the balance of power tip in BN's favour following the defection of four of its assemblymen.

Investors fear similar defections in a hung parliament could result in a change in Putrajaya.

While it is difficult to predict how long the uncertainty in the stock market would last, Monem expects it to be very volatile. However, regardless of which coalition wins, he is long-term positive on the local stock market.

"The government can derail but in the long run, the Malaysian economy and stock market will be fine," he says.

Monem also believes Malaysia is a healthy democracy and that laws are in place to ensure continuity of government regardless of who wins. As such, he suggests that investors with a long-term view buy on market weakness.

# SCENARIO 4

### Opposition victory puts Malaysia in uncharted territory

A shocking victory by Pakatan Harapan (PH) will put Malaysia in uncharted territory as BN has ruled since independence.

According to Eng, a negative kneejerk reaction is expected under this scenario because it is unprecedented, thus magnifying uncertainties. "The recovery of the market would depend on how the new government wins investor confidence and [how it] implements its policies."

A head of research says the risk of a less-than-smooth transition of power could rattle the market. Recall that in 1969 when the Alliance Party (before BN was formed) lost its majority in Perak, Selangor and Penang in addition to Kelantan, riots broke out.

Known as the May 13 Incident, it resulted in a state of emergency or darurat being declared by the Yang di-Pertuan Agong and the suspension of parliament. The National Operations Council was then established as a caretaker government to temporarily govern the country.

Such an incident is unlikely to recur given the independence of the security forces and strong civil servant framework.

Bursa Malaysia said records for the Straits Times Industrial Index's performance following the riots were not available. The index was the benchmark indicator then for the joint Malaysian-Singapore stock markets until post-1973.

In his book Stock Market Investment in Malaysia and Singapore, Dr Neoh Soon Kean, founder and executive chairman of investment consulting and publication firm Dynaquest Sdn Bhd, states that

# KPING SALE OF SHOPPING MALL

Offers are invited for the purchase of the land and building (collectively known as the "Property") located within Bandar Perda at Seberang Perai, Pulau Pinang on an "as is where is" basis:

# The Property

# Land

A freehold land bearing Title No. Geran Mukim 1190, Lot No. 10124 measuring approximately 856,358.06 square feet (19.6593 acres) located at Seberang Perai.

# Building

A four (4) storey shopping mall with a level of basement car park measuring approximately gross floor area of 219,624.56 square metres (2,364,019 square feet) and net lettable area of 107,004.23 square metres (1,151,784 square feet)

A Memorandum of Sale containing further details of the aforesaid Property as well as the terms and conditions of the sale can be obtained at RM1,060.00 (inclusive of 6% GST) per copy at the address indicated below.

For appointments and further details, please contact:

The Receivers and Managers

KPMG Deal Advisory Sdn Bhd (462265-P)

Level 10, KPMG Tower, 8, First Avenue, Bandar Utama,

47800 Petaling Jaya, Selangor Darul Ehsan, Malaysia
